

Applications

Landing strips

Taxiways

Helipads

Access roads

Mooring areas

Parking areas

- ⇒ No sludge
- ⇒ No standing water
- ⇒ Instantaneous effective surfacing, capable of withstanding stress

ECOGRID®

– the all-purpose expert

ECOGRID® is also an established name in the fields of building construction, roof gardens, erosion control, equestrian sports and the reinforcement of golf courses. ECOGRID® is even employed in the agricultural sector and in zoos. Thanks to its extremely weatherproof materials, the application possibilities of ECOGRID® are practically limitless.

ECOGRID® fulfils all the requirements of an ecological surface reinforcement system without the need to seal the ground surface in the process. What's more, the recycled, durable tiles made from pure polyethylene are completely environmentally friendly.

ECOGRID®

Quality made in Germany

Handling and laying

One two three – lay your ECOGRID® in the twinkling of an eye! 12 individual sections are preconnected in the factory to form easy-to-install units. This means that you can lay an area of 1.33 m² in one go. Laying them couldn't be simpler.

Step 1

Easy installation

Step 2

Lay the whole area out and align

Step 3

Lock in safety locking system

Turfed landing strips

Turfed taxiways

Helipads

Access roads and paths

Mooring areas

Parking areas

Reinforcement of airstrips

Concept and design: medienpuls.com

Surface reinforcement with natural drainage

- ✓ Patented locking system
- ✓ Load capacity of up to 350 t/m²
- ✓ Low run-off coefficient
- ✓ Ecologically viable
